Full-Stack Developer

Software Engineer with practical experience designing, developing, and deploying full-stack applications using React, Vue.js, Next.js, Node.js, and Django. Successfully delivered end-to-end solutions, including a real-time food ordering platform and a university-wide proposal approval system. Backed by industry experience gained during my internship, including containerization and system migration, I focus on building secure and scalable systems from frontend UI to backend infrastructure.

Skills

Languages: JavaScript, TypeScript, Python, SQL

Frontend: React, Next.js, Vue.js, Tailwind CSS, Bootstrap

Backend: Node.js, Django

Database: MySQL, MongoDB, PostgreSQL, Firebase

DevOps & Tools: Docker, Docker Compose, Nginx, Linux, Proxmox VE, Git, CI/CD

EDUCATION

Mae Fah Luang University, Chiang Rai • Computer Engineering

(2022 – 2026)

EXPERIENCE

Software Engineer Intern, Perceptra

(Jan 2026 – Apr 2026)

Tech Stack: Python, Django, PostgreSQL, Docker, Proxmox, Linux, Ansible

- Upgraded core system architecture from legacy microservices to a unified platform, diagnosing and resolving version compatibility bugs across multiple services during the migration.
- Implemented hardened container images and integrated Renovate Bot to automate vulnerability scanning and dependency updates.
- Wrote 20+ unit tests covering critical backend configurations (e.g., RabbitMQ, Database connections, and routing endpoints) to prevent regression bugs during deployment.
- Refactored Ansible deployment scripts to utilize interactive prompts instead of static environment files, simplifying the configuration process for different environments.
- Generated standardized 'Golden Images' using Proxmox VMs and provisioned bootable flash drives, streamlining on-premise deployments for the implementation team.

Wanasom Food, Mae Fah Luang University

(Jul 2025 – Dec 2025)

Tech Stack: React.js, Node.js, MongoDB, Docker, Docker Compose, Nginx, Cloud VPS, Linux

- Built a full-stack food ordering platform, owning UX/UI design, React frontend, and Node.js/MongoDB backend from scratch to production deployment.
- Developed a real-time order tracking system with Socket.io and LINE Messaging API, delivering instant status notifications to customers and kitchen staff.
- Supported Dine-in and Delivery workflows with Google Maps geolocation pinning for delivery address selection and Google OAuth2 for user authentication.
- Built an Admin Dashboard with sales analytics, promotion scheduling, and a CMS allowing admin to update landing page content and FAQs without code changes.

The Center for Academic Services, Mae Fah Luang University

(Feb 2025 – Jul 2025)

Tech Stack: Vue.js, Node.js, MySQL, Docker, Docker Compose, Nginx, Cloud VPS, Linux

- Designed and developed a university-wide Project Proposal Submission System utilized by all academic departments.
- Implemented role-based access control (RBAC), Google OAuth2 login, and multi-step proposal forms with file attachments.
- Built workflow approval systems and dashboards to streamline document tracking and reporting for university staff.

UNIVERSITY PROJECTS

Hewkad, Senior Project

(Jul 2025 – Dec 2025)

Tech Stack: React.js, Node.js, MySQL, Firebase, Docker, Docker Compose, Nginx, Cloud VPS, Linux

- Built a peer-to-peer errand and delivery platform allowing users to post shopping requests and accept delivery jobs within local markets.
- Developed the full stack from initial UX/UI prototyping to public launch, managing the complete software development lifecycle.
- Provisioned cloud servers and managed end-to-end production deployment, including domain registration and Docker container configuration.
